PROFESSIONAL SUMMARY

AI Full Stack Developer Intern with experience in Python backend systems creating RESTful APIs and working with Generative AI. I have a history of delivering results that matter—like processing, over 50,000 data records without losing any data and cutting pipeline delay by 40 percent. I build production- RAG pipelines work with FastAPI for microservices and design interactive web interfaces to fix system slowdowns and make things faster.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, JavaScript, TypeScript
- **Libraries & Frameworks:** FastAPI, Flask, React.js, LangChain, LlamaIndex, Pandas, NumPy
- **Databases & Analytics:** PostgreSQL, MySQL, Vector Databases (FAISS, ChromaDB), Redis, Power BI
- **Developer & AI Tools:** Git, GitHub, Docker, Postman, VS Code, Jupyter Notebook, OpenAI API
- **Core Competencies:** Full-Stack AI Integration, RAG Pipeline Design, RESTful API Development, ETL Pipelines

PROFESSIONAL EXPERIENCE

Vangrove Tech Pvt. Ltd.

Hyderabad, India

AI Developer intern

Jun 2026 – Present

- I worked on Data Analytics and AI Full-Stack Development projects. I used Python and SQL to analyze data process it and generate insights.
- I contributed to end-to-end analytics workflows. These workflows included collecting data, cleaning data transforming it analyzing it and visualizing it.
- I assisted in developing and integrating features into full-stack applications. I worked closely with the development team.
- I. Optimized data-driven solutions and analytical dashboards. I transformed data into meaningful insights to support project requirements and decision-making.

ACADEMIC PROJECTS

Health Connect Appointment Hub

June 2025 – May 2026

HTML, CSS, JavaScript, Node.js, Express.js, MongoDB

- Developed a web-based appointment booking platform that lets patients find doctors and clinics and book appointments.
- Created modules that patients and admins and doctors can use to manage appointment times, bookings and cancellations.
- Set up a system that uses a database to keep patient, doctor and appointment information safe and updates availability in real time.
- Made a simple and easy to use interface that makes the process of booking appointments easier and cuts down on manual work.

Store – E-Commerce Platform

May 2026 – Aug 2026

React, Node.js, Express, MongoDB, JWT

- Built a full-stack e-commerce platform with two applications—a customer storefront and an admin dashboard—both built using React and Vite sharing the same backend.
- Created a Node.js/Express REST API powered by MongoDB to handle product catalog order processing, customer data and inventory management with JWT authentication to secure access.
- Added automated email notifications using Nodemailer and Gmail SMTP to send order confirmations and system alerts to users.
- I deployed a three-service architecture consisting of two frontends and one backend API on Render. I used a multi-service Blueprint to make the CI/CD process smooth.
- I added inventory tracking to help the store owner manage product availability in time. Inventory tracking lets the store owner see product availability now..

EDUCATION

Bharat Institute of Engineering and Technology

Hyderabad

Bachelor of Engineering – Information Technology; GPA: 7.2

2022 – 2026

Alphores Junior College

Karimnagar

Intermediate 10+2; GPA: 8.2

2020 – 2022

ACHIEVEMENTS

- Saylor Academy Award: Introduction to Python.
